ANGELOS BOULES

Tyngsboro, MA 01879 **|** (978) 677-4584 | boulesangelos@gmail.com | www.linkedin.com/in/angelos-boules

EDUCATION

Boston University, Boston, MA *Anticipated Dec 2028*
Master of Science in Computer Science & Artificial Intelligence
Relevant Coursework: Foundations of Programming and Systems, Mathematical Foundations of Machine Learning

University of Massachusetts Lowell, Lowell, MA *May 2026*
Bachelor of Science in Computer Science, Minor in Mathematics GPA: 4.00
Relevant Coursework: Data Structures, App Development, Operating Systems, Logic Design, Assembly & Architecture, Discrete Math, Calculus, Linear Algebra, Analysis of Algorithms

SKILLS

Programming Languages & Frameworks: C/C++, Java, Python, HTML, CSS, JS/TS, React, Angular, SQLite, Spring Boot, C#
Tools & Operating Systems: Linux, MacOS, Windows, Git, ROS, Insomnia, Postman, AWS, Docker, Jenkins

RELATED EXPERIENCE

Full Stack Engineering Intern | Angular, TS, Java, Agile, Insomnia, Git *Jun. 2025 – Aug. 2025*
Fidelity Investments Merrimack, NH
- Built full-stack features using Angular and Java, integrating improving UI experience and consolidating microservices
- Developed AG Grids with data export functionality and implementing RESTful APIs to obtain data. Used Insomnia and Postman to analyze API payload parameters and responses
- Worked in Agile environment and collaborated with senior engineers to obtain insight into different problems and their solutions. Participated in daily stand-up meetings to report progress and accept feedback.

Software Engineering Co-op | C#, Git *Jan. 2025 – May 2025*
Teradyne - North Reading, MA
- Contributed to the Verta test-station, developing C# applications to interface with embedded computer through test-station via SCPI commands. Utilized Visual Studio and Git for code review and collaboration
- Developed test programs using Pseudo-Random Binary Sequences, to identify high-speed signal issues with >95% accuracy
- Diagnosed and resolved device driver enumeration issues using both software and hardware methods in the lab

Robotics Boot Camp | ROS, Python, OpenCV, Git *May 2023 – Jun. 2023*
University of Massachusetts Lowell – Lowell, MA
- Worked with Robot Operating System (ROS). Implemented communication protocols for sensors by building combinations of publishers and listeners on different topics to finetune robot decisions.
- Worked with OpenCV and learned Git version control, utilizing simulated robotics environments for development.

PROJECTS

Brokerage Trading Platform | Java, Spring Boot, HTML/CSS, Angular, TS, Kafka, AWS, Jenkins CI/CD *Nov. 2026*
- Built a full-stack trading application with a Spring Boot backend (controller/service/repository layers) and an Angular frontend
- Used Kafka as a message queue for orders and to track order status history, creating an audit trail.
- Containerized Kafka, PostgreSQL, and the API as separate Docker services.
- Deployed on AWS: Angular build on S3, PostgreSQL on RDS, and the backend in a VPC with public and private subnets.
- Used SonarQube to measure test coverage and code quality, reaching 81%-line coverage.
- CI/CD via Jenkins build pipeline

Dynamic N-Body Simulation | C++, Unit Testing, Memory Handling *Mar. 2024*
- Developed a simulation depicting particle interactions based on calculations of their physical properties. Visualized celestial body motions graphically, updating positions time steps. Emphasis on memory efficiency using smart pointers to control the lifetimes of objects. Files are read from the command line and loaded graphically in an SFML window.
- Added comprehensive unit testing to validate the behavior of the various classes and methods using the Boost Unit Testing framework.
